

XM satellite radio is great. The variety of music they offer is fabulous and as a paying customer, I should be permitted to hear what they want me to. They play everything and that is a wonderful thing! XM broadcasting instant traffic and weather is a great service, as I and other listeners travel from place to place. It's very useful information to hear on a second's notice when one needs it. You should reject the NAB's petition 04-160 and instead support XM's ability to provide this programming. I pay for it and I love it!! XM satellite radio is the best and should continue to be supported. This is the direction in which radio should move.
